

Additional Terms and Definitions:

Ribbons — very wide displays/video walls as compared to the height (very low), can be curved, flat or angled (90 degrees) and need to include raster mapping to ensure the content fits within the endpoint correctly. If the media is not high enough, then you could have an uneven black (or other color) border due to missing pixels. If the media is too high, then the images or videos will be cut off (top and/or sides).

Visual Instruction Plan (VIP) — a set of visual prompts that provide a clear step-by-step outline of what participants must do to complete a procedure or process.
